SafeNet[10]

Quick guide:
Safe deposit system administration with
Easy Mode

conTEcon
software GmbH

Efficiently administrating rental lockers with the SafeNet 10 Easy Mode

What is SafeNet 10 Easy Mode?

SafeNet 10 Easy Mode is a browser-based desktop which enables the efficient administration and regulation of safe deposit systems with the aid of the latest WEB technologies.

The user is intuitively supported by the program's integrated wizards during the realisation of administration tasks.

Why use this handbook?

Within a small amount of pages the basics of the handling of all navigation elements of SafeNet 10 Easy Mode are explained.

You can flip through this handbook or jump directly to a specific topic by selecting it on the right side of this page.

Table of contents

The home page in Easy Mode

SafeNet¹⁰

Program information
Click here to indicate the recent program version

User account
Display of the latest user account

Branch selection
Selection and display of the branches whose safe deposit systems shall be edited.
Only branches for which the issuer is authorised will be displayed.

Main navigation
Here you will find features in order to switch to the different program modules, e.g. the web portal, dashboard, monitoring etc. depending on the individual configuration and eligibilities.

Breadcrumb navigation
This will always display the current adaptation step. The single elements can be selected in order to return to the previous adaptation steps.

Pull-down menu
This shows a variety of the various administrational features which can be selected. When a feature is chosen, it will be displayed in the breadcrumb navigation.

Facility status
Depending on the individual configurations and eligibilities feature for switching to the different program moduls, for example the web portal, dashboard, monitoring etc. can be found here.

Splittable site status
The width of the status window can be adapted individually by pressing the left mouse button and pulling it to the desires size. One click on the three dots makes the status window disappear under the righthand border. Then a small arrow will appear there that brings back the status window permanently. One click on the right border shows the status window shortly until your mouse leaves this area again.

Splittable incident list
The handling is analogue to the splittable site status

Recent incident list
Overview of the facility's recent incidents since the registration of the user.

Notification
During some adaptation steps one will receive a notification.

Locker selection
As soon as a locker has been chosen (by clicking on it with the mouse) after selecting the locker type to be leased the 'next' function of the step by step assistant will become active and then the user can move on to the following adaptation step.

Step by step assistant
In SafeNet 10 the users are guided through complex administration procedures with the aid Of the step by step assistant.

Step by step assistant - Next
When one adaptation sep has been completed (all data is recorded) the 'next' function will be Activated so that the user can resume with the following adaptation step.

ConTecon
software GmbH

Adaptation information
This will show detailed information about the Object currently being worked on.

Progress display
This will always display the current adaptation step. The individual elements can be selected in order to return to the previous procedures.

Register a new person
Click here if the data of the person is not yet Included in the system.

Search field
In order to search for already recorded persons simply insert the name into the search field. If you move the mouse cursor onto the question mark and let it rest there shortly, a tooltip with further information will be displayed.

Results list
By choosing a person in the results list (by clicking on a certain name with your mouse) you will automatically be transmitted to the next adaptation step.

Step by step assistant - Cancel
An adaptation step can be cancelled at any time.

Step by step assistant – Next
Right now the 'next' function is still deactivated (grey) because the adaptation step hasn't yet been completed. In this case a person still needs to be selected.

Incident research

Expanded search
Click here to narrow down the incident search to a certain time frame.

Web portal research
This branches one to the incident search of the SafeNet 10 Web portal. There even more options for incident searching will be offered.

Breadcrumb navigation incident search
This will always display the current adaptation step. The individual elements can be selected in order to return to the previous procedures.

Intelligent full-text search
Simply enter the terms to be searched for like names, incidents or locker numbers into the search field and select Enter. When moving the mouse cursor onto the question mark a tooltip with entry possibilities will be displayed.

Results list
This will show you the results determined during the search in chronological order.

Place of discovery display
This includes detailed information about the result of the executed search shortly before.

Context display
When moving the mouse cursor over a certain incident, the user can look into all occurrences that emerged chronologically before or after the chosen incident by selecting the grey triangle.

Incident list
This displays all accessible data for each incident. The first line shows you the locker number as well as the occurrence.
